

## Windows en SMB

### Check Versie van samba in Windows

get-smbconnection

### Samba-versies

- **SMB 1** introduced in DOS days, and was also called CIFS in its later version (think of it like SMB 1.1). First versions of **Samba 1.x** supported SMB and CIFS
- **SMB 2.0 / SMB2.02** introduced with Windows Vista / 2008 is supported with **Samba 3.6**
- **SMB 2.1** introduced with Windows 7 / Windows 2008 R2 is supported with **Samba 4.0.0**
- **SMB 3.0** introduced with Windows 8 / Windows 2012 is supported by **Samba 4.2**
- **SMB 3.02** introduced in Windows 8.1 / Windows 2012 R2 is **not yet supported by any version of Samba** (its in the works I assume)
- **SMB 3.11** introduced in Windows 10 / Windows 2016

### Gebruik van net use

net use s: \\nasbox\private /user:alice 123

```
C:\Users\user0>net use s: \\nasbox\private /user:alice 123
De opdracht is voltooid.

C:\Users\user0>s:
S:\>dir
Volume in drive S is private
Volume Serial Number is 4B23-432E

Directory of S:\

04/05/2021  15:26    <DIR>          .
04/05/2021  15:49    <DIR>          ..
04/05/2021  15:26                24 priv.txt
               1 File(s)                24 bytes
               2 Dir(s)  34.068.811.776 bytes free
```

net use s: /delete

```
C:\Users\user0>notepad test.txt
C:\Users\user0>copy test.txt s:
1 file(s) copied.

C:\Users\user0>net use s: /delete
s: is verwijderd.
```
